## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election with traverse of invention I in Paper No. 8 (dated 07/21/2003) is acknowledged. The traversal is on the ground(s) that the process of figure 2 cannot make a product of invention I. This is not found persuasive because Applicant provides no evidence to support such contention. It should also be noted that a substrate structure comprising a plurality of parallel columns of direction alignment as shown in figure 3 as claimed can be made by a method of forming in figure 2. Therefore, the requirement is still deemed proper and is therefore made FINAL.

### *Specification*

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-2 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art (APA), figures 1 and 3-4.

The above claims are anticipated by APA, figures 1 and 3-4 which discloses a liquid crystal display (LCD) cell (10) comprising:

- . a first substrate (14b);
- . a plural of parallel columns of director alignment material (17) disposed on the surface of the first surface, each one of the columns having an oblique angle longitudinal axis with respect the surface of the first surface (see figure 3), and each of the columns terminating in a distal end having a substantially flat surface (22 and/or 20a in figure 4);
- . a second substrate (14a);
- . a liquid crystal material (layer interposed between two substrates), wherein portions of such liquid crystal material inherently in contact with the parallel columns of director alignment material.

### *Conclusion*
